Re: Global Partners LP No. 6 Oil Vapor Pressure Test Results as Required Under Section 114 Testing Order

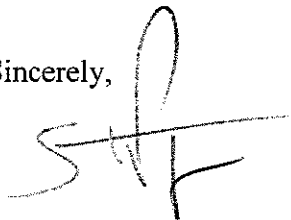

Global Partners LP (Global) submits the attached laboratory analysis for vapor pressure of No. 6 oil from the South Portland Terminal. This submittal fulfills Testing Order 7.b of the Section 114 letter issued to Eric Slifka, President and CEO of Global Partners LP dated November 2, 2011.

The vapor pressure results are provided in the attached laboratory reports provided by Intertek and Phoenix Chemical Laboratory, respectively. The asphalt liquid sample was collected on April 16, 2013 at 11:00 am from Global's South Portland Terminal Tank 3. The No. 6 oil temperature on the day the sample was collected was 105 F. The No. 6 oil contained in Tank 3 was delivered to the South Portland Terminal on April 15-16, 2013 by Kirby Marine on the vessel Columbia and came from the United Terminal in Riverhead, Long Island, NY.

The Intertek laboratory in South Portland, ME handled the vapor pressure testing using ASTM Method D323. After detailed search, Phoenix Chemical Laboratory in Chicago was found as a laboratory willing to do the ASTM Method D2879 on the No. 6 oil sample.

If you have any questions, please do not hesitate to call me, at (603) 647-5746 ext 102.

Sincerely,

A handwritten signature in black ink, appearing to be 'S. Piper', with a large loop at the top and a horizontal line across the middle.

Stephen Piper, P.E.
Senior Project Manager
